

SERIES F-E / SERIES F-NSF PUSH-IN FITTINGS FOR USE IN THE FOOD INDUSTRY

These fittings are made of materials suitable for use in the food industry. They can also be used with hot and cold tap water. All brass component parts undergo a clean-lead process, which consists of removing lead from the surface layer of the fitting; the gaskets are made of special FDA-approved Viton®. These fittings do not contain technopolymers, thereby avoiding problems of compatibility with detergents and other chemical agents. This choice of materials allows the fittings to be used up to 150°C, which makes them suitable for other high-temperature applications, in addition to the food industry. The threads are cylindrical and under-head O-rings provide a pneumatic seal. This avoids the need for sealants (e.g. Teflon®), which could release solid fragments during screwing and unscrewing that would contaminate the environment or the fluid. Our fittings can be screwed and unscrewed any number of times and still remain clean and pneumatically sealed. This choice of materials and treatments make these fittings suitable for use in the chemical, pharmaceutical, medical and electronics industry. The fittings are available in two series:

- Series **F-E** fittings are made of brass that undergoes a surface clean-lead process, followed by a surface coating with inter-metal alloy compound; they comply with regulatory standards applicable in Europe and other world countries for use in contact with foodstuffs or drinking water.
- Series **F-NSF** fittings are made of brass with a low-lead content ($\leq 0.2\%$) that undergoes a further surface clean-lead process in compliance with US standards, and are certified to NSF169 and NSF61 standards.

A standard range of fittings is available, but other designs can be developed on specific request.

SERIES F-NSF

SERIES F-E

TECHNICAL DATA

		SERIES F-E	SERIES F-NSF
Threaded port		M5 - G1/8" - G1/4" - G3/8" - G1/2"	
Pipe diameter	mm	Ø 4 - Ø 6 - Ø 8 - Ø 10	
Temperature range	°C	- 20 to + 150	
	°F	- 4 to 302	
Pressure range		- 0.99 bar to 16 bar / - 0.099 MPa to 1.6 MPa	
Recommended pipe		Rilsan PA 11 - Nylon 6 - Polyamide 12 - Polypropylene - PTFE	PTFE

COMPONENTS

SERIES F-E

- ① Body: unleaded brass treated with environmentally-friendly intermetallic alloy
- ② Gripper: unleaded brass treated with environmentally-friendly intermetallic alloy
- ③ Seal: FDA-approved Viton®
- ④ Port seal: FDA-approved Viton®

SERIES F-NSF

- ① Body: low-lead brass ($\leq 0.2\%$)
- ② Gripper: brass (not in contact with the fluid)
- ③ Seal: FDA-approved Viton®
- ④ Port seal: FDA-approved Viton®

ADVANTAGES / CERTIFICATIONS

SERIES F-E

ADVANTAGES

Under-head O-ring

Can be screwed and unscrewed any number of times; no fragments of Teflon® or sealant will contaminate the fluid.

Corrosion resistance

The intermetallic alloy deposited on the surface and Viton® are compatible with numerous substances.

No plastic parts

No risk of incompatibility.

CONFORMITY DECLARATIONS

- Regulation 1935/04 EU.*
- Regulation 2023/06 EU.

SERIES F-NSF

ADVANTAGES

Under-head O-ring

Can be screwed and unscrewed any number of times; no fragments of Teflon® or sealant will contaminate the fluid.

No plastic parts

No risk of incompatibility.

CERTIFICATIONS

- NSF/ANSI 169: products in contact with food.
 - NSF/ANSI 61: products in contact with drinking water.
- More specifically, they are certified according to section 4 in the "commercial hot 82C" category, which is the most restrictive and includes the following subcategories:
- Domestic cold temperature
 - Domestic hot temperature
 - Commercial hot temperature
 - Environment pH5.

CONFORMITY DECLARATIONS

- DM 174
- Regulation 1935/04 EU.*
- Regulation 2023/06 EU.

NSF/ANSI 61
NSF/ANSI 169

* Release tests performed at 20°C for a duration of 10 hours equal to 50°C for 30 minutes, with peaks of 5 minutes at 80°C (pasteurization) equal to peaks of 2/3 minutes at 120°C (sterilization).

INSTALLING THE PIPE

Compressed air pipes must be used in compliance with some basic criteria in order to ensure long life and proper operation of the fitting:

- check that the conditions for the installation and use (e.g. temperature and fluid used) comply with the characteristics stated by the pipe manufacturer;
- check the pipe size; oversized pipes could not fit properly, undersized ones could not ensure pipe retention and air tightness.

The cut should be as accurate as possible at a right angle with the pipe axis.

Wrong

Correct

- the bending radius of the pipe installed must be as wide as possible. The fittings have been designed to ensure axial seal of the pipe; excessive curvature could considerably shorten the life of the pipe.
- the pipe must not be subjected to excessive axial stress and it must be of the right length for snugly fitting (not too long or too short).
- correct insertion of the pipe into the fitting is essential for air tightness and pipe retention. Make sure that the pipe is pushed right into the seat.
- check that the pipe does not encounter any obstacles or blockages along its way, which could cause tensile stress of the pipe in the fitting.
